

Rutwik Patil (Devops Engineer)

Kolhapur, Maharashtra, India | +91 7218918934 | rutwikpatil73@gmail.com | www.linkedin.com/in/rutwik-patildevops/

Professional Summary

Software Engineer with 2 years of experience designing and optimizing CI/CD pipelines, cloud infrastructure (AWS), and containerization, orchestration. Proven track record of reducing deployment time by 60%+ and improving pipeline reliability through automation, parallelization, and observability. Strong focus on building scalable, production-grade systems with Kubernetes, Infrastructure as Code, and monitoring.

Experience

PROJECT ENGINEER

WIPRO | MARCH 2025- MAY 2025

- Assisted in release validation and deployment coordination for cloud-based microservices, identifying issues using **CI/CD pipeline** logs and monitoring dashboards.
- Contributed to deployment documentation and runbooks to improve release consistency and reduce onboarding time for new team members.

ASSOCIATE SOFTWARE ENGINEER

BOSCH GLOBAL SOFTWARE TECHNOLOGIES | JANUARY 2023 – OCTOBER 2024

- Remodeled **Jenkins CI/CD pipelines** for **10+ microservices**, which reduced deployment time from **90 minutes** to **35 minutes** using **parallel execution** and **dependency caching**.
- Improved **pipeline reliability** by **35%** by diagnosing build failures, resolving dependency conflicts, and implementing retry and failure-handling mechanisms.
- Containerized** development and testing environments using **Docker**, reduced environment setup time from **4 hours** to **2 hours** and improved consistency across teams.
- Managed CI/CD infrastructure on **AWS (EC2, S3)**, including artifact storage, pipeline execution environments, and logging via **CloudWatch**.
- Supported production deployments by troubleshooting build failures and release issues using Jenkins logs and **AWS monitoring**.

Projects

PROJECT 1: AUTOMATED AWS COST OPTIMIZATION SYSTEM (EC2 SCHEDULING + EBS SNAPSHOT LIFECYCLE MANAGEMENT)

- Designed and implemented a serverless cost optimization system managing **15+ EC2 instances** and **50+ EBS snapshots** using **AWS Lambda** and **EventBridge**.
- Automated EC2 start/stop scheduling based on instance tag policies, which helped to reduce unused compute costs **by 30–40% across** non-production environments.
- Implemented **EBS snapshot** lifecycle management to identify and delete unused snapshots, which reduced storage costs by **25%**,
- Enforced **IAM** least-privilege access and integrated CloudWatch logging/alerts, achieving **secure and observable operations with zero manual intervention**.

PROJECT 2: LOG ANOMALY DETECTION & ALERTING SYSTEM (DEVOPS / AIOPS)

- Built a **containerized** log analysis service that processes 10,000+ logs/day based on past time-window data.
- Detected **anomalies** with **85%+** accuracy using statistical thresholds and Isolation Forest model.
- Reduced false-positive **alerts** by **40%** using **alert suppression** and **stateful tracking**.
- Deployed on **Kubernetes** with scalable ingestion, handling **3x traffic** spikes without affecting performance.

PROJECT 3: AI ASSISTED DOCKER MONITORING SYSTEM

- Built an NLP interface using the Docker Engine API to translate plain-text queries into structured commands for fetching real-time logs and container states.
- Implemented health checks based on **CPU**, **memory**, and restart patterns, improving issue detection time by **50%**.
- Designed workflow orchestration using Temporal, ensuring **99%+ task execution reliability** with retries and failure handling.

Tools and Technologies

- CI/CD:** Jenkins, GitHub Actions, | **Containers & Orchestration:** Docker, Kubernetes
- Cloud:** AWS (EC2, S3, IAM, VPC, ECS, Lambda, EKS, ECR) | **Monitoring:** Grafana, Prometheus
- Programming and Scripting:** Bash, Groovy, Python. | **IAC:** Terraform, Ansible
- OS & Version control:** Linux, Git

EDUCATION

B.TECH. IN ELECTRONICS AND TELECOMMUNICATION ENGINEERING | JUNE 2018 - MAY 2022 |
